

ABSTRACT OF THE DISCLOSURE

A laminated color dye filter including a layer of substantially transparent dye-colored plastic laminated to a layer of substantially transparent base material such as glass. The thermal conductivity of the base material is greater than the thermal conductivity of the plastic. Upon the plastic becoming heated as light passes therethrough a portion of the heat is transferred to the base material which dissipates or conveys away at least a portion of the heat thereby providing the laminated color light filter with an increased useful life. An article of manufacture including a layer of substantially transparent dye-colored plastic having a layer of substantially transparent pressure-sensitive adhesive applied to one surface thereof and which may include a release liner or sheet covering the layer of adhesive.
